Rectal Suppository Mold

The **Rectal Suppository Mold** is a device to produce suppositories that are specially designed to heal hemorrhoids and anal fissures more efficiently than regular suppositories. The ergonomic shape accommodates for patient comfort while strategically administering the medication directly to the affected areas.

SUPPOSITORY FEATURES

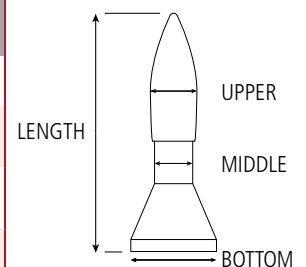

- Suppository design allows for direct localization of the medication for both internal and external hemorrhoids
- Can be used with formulations for immediate or sustained absorption
- Air vent in the suppository prevents displacement of the suppository
- Contoured shape is more comfortable, leading to patient compliance

MOLD FEATURES

- 6 Cavities with volume of 7mL ± 0.5mL
- 2 Durable mold plates (hard anodized aluminum)
- 3 Ejector plates and locking knobs (stainless steel)
- Autoclave safe
- Easy to clean - compatible with IPA 70%
- Mold Calibration :
 - MEDISCA's SPG™ Supposi-Base = 6.6g/suppository,
 - MEDISCA's PolyPEG Suppository Base = 8.0g/suppository

SUPPOSITORY DIMENSIONS

PARAMETER		APPROXIMATE DIMENSION IN MM	APPROXIMATE DIMENSION IN INCHES
